... Espalier Fruits ...

Espalier trees are those which have been tied, trained, and trimmed since babyhood to grow in many shapes: palmetto, single U, double U, cordon and other shapes which cannot be properly named. They are to be planted along a wall, fence or trellis. They are grown everywhere in Europe. The present styles of architecture in California with patio walls, etc., afford excellent location for planting and the flat styles of training allow them to be grown where there would be no room for an ordinary tree.

Many varieties to choose from, in Grapes as well as Fruit trees. Write us for prices and detailed information.
